

Stream API Test Client

Stream API Test Client is a utility mainly targeted at developers working with Stream API. It implements all necessary actions like creating the orders, starting estimation, proofreading etc. together with text representation of outgoing requests/incoming responses. It serves to help developers with their own exploring of Stream API.

The most important feature is authorization. You have to be authorized before using API actions. To do that simply select *Authorization* in *Tools* menu. Then click on *StartAuth* button and you will receive your link together with authorization token. You should put the link into browser, use your credentials to log into idioma site and grant access. When logged in you can complete authorization process by using *CompleteAuth* button.

The main screen is divided into several parts – menu, cart area, items area and communication area.

It is recommended to start with *Workflow wizard* located under *Tools* menu. It explains whole workflow step by step.
